The Chinese Tung Oil Nut tree is a native of China and is one of the most valuable trees in the world. It is a hardy tree that can grow in any soil and is resistant to all diseases and insects. The tree is a source of food for man and stock and is also a source of oil for use in the manufacture of soap, varnish, and other products. The tree is a source of fuel for the home and is also a source of timber for the construction of houses and other buildings. The tree is a source of shade for the farmer and his family and is also a source of beauty for the landscape. The tree is a source of life for the farmer and his family and is also a source of life for the landscape.

Tung trees may be planted in rows or in groups. The trees should be planted in rows and should be spaced 10 feet apart. The trees should be planted in rows and should be spaced 10 feet apart. The trees should be planted in rows and should be spaced 10 feet apart.

There are several varieties of the Tung tree. The most common variety is the Fordi variety. The Fordi variety is a hardy tree that can grow in any soil and is resistant to all diseases and insects. The Fordi variety is a source of food for man and stock and is also a source of oil for use in the manufacture of soap, varnish, and other products. The Fordi variety is a source of fuel for the home and is also a source of timber for the construction of houses and other buildings. The Fordi variety is a source of shade for the farmer and his family and is also a source of beauty for the landscape. The Fordi variety is a source of life for the farmer and his family and is also a source of life for the landscape.

In the nursery row at the Citronelle Nursery & Orchard Company, there are 370 healthy trees of the Fordi variety and of the cluster type. These trees are two years old, having on both years the second year's growth from seed. Clusters from 8 to 14 nuts are common and one cluster of 24 was found. As high as 250 pods have been counted on one tree in this nursery row.

The Citronelle Nursery & Orchard Company will offer for sale and delivery after December 1st, 1930, 100,000 trees grown from the cluster variety seed, at prices that will enable every man who has an acre of land to plant 1,000 trees.

For orders booked for delivery as per above, and in return for further notice, we will quote the following prices for trees of one season's growth running from two feet old to the first row in 1000, packed and ready for delivery at the Nursery.

10 to 99, 15c. each; 100 to 499, 12c. each; 500 to 999, 10c. each; 1,000 and over, 8c. each.

The importance of establishing this industry is such that your order should be placed at once, and every planter should urge his neighbor to plant, thus insuring an important industry which will put the South land on its feet as nothing else in agriculture or horticulture has done. We want, or better still, come and see us, ask for further information, place your order at once and increase in being planting season.
